

Volleyball rotation wheel

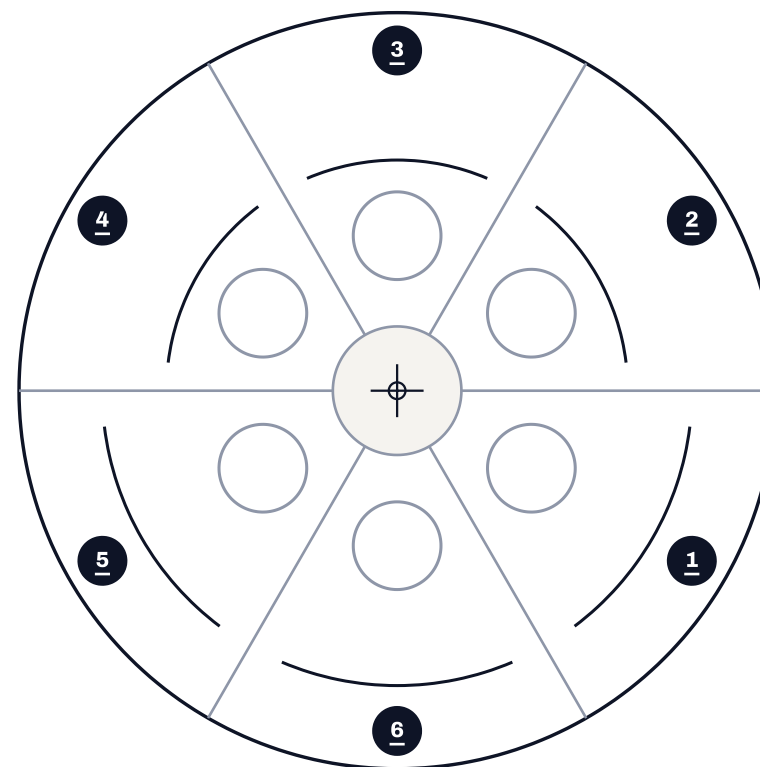

A court and a turning disc to cut out. At every side-out, turn the disc one slot clockwise: whoever is in I serves.

Print this page on card stock if you can.

US Letter: choose "Fit to page".

Turning disc slots 1 to 6 = serving order

How to put it together

1. Cut out the court and the disc along the thick line.
2. Poke a small hole through the cross in the middle of both.
3. Lay the disc on the court, push a brass paper fastener (brad) through both holes and bend the legs flat. Not too tight: the disc has to turn.
4. Write your players in serving order in slots 1 to 6 (jersey number or role in the circle, name on the line) and turn slot 1 to position I.

How to use the rotation wheel

Set it up once before the set, then only turn it when your team wins the serve back.

Before the set

- Slot 1 is the player who starts in position I and serves first. Slot 2 starts in II and serves second, and so on up to slot 6 in VI.
- That order is fixed for the whole set. Turn the disc until slot 1 is at I: the wheel now shows your starting lineup.
- Write in pencil, or laminate the disc and use a whiteboard marker, so you can fill it in again for every match.

During the set

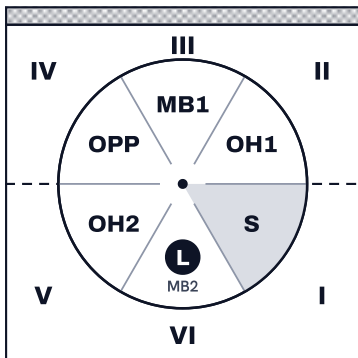

- Side-out:** your team wins the rally while the opponent was serving. Turn the disc one slot clockwise: II to I, III to II, and so on. Whoever is now in I serves.
- Point on your own serve:** do not turn. The same player serves again.
- Front and back row:** IV, III and II are at the net, V, VI and I in the back row.
- Substitution:** the sub takes the place of the player going out, including in the serving order. Write them in the same slot.
- New set:** you can hand in a new starting lineup. If the order stays the same, just turn the wheel to the player who now starts in I.

The libero

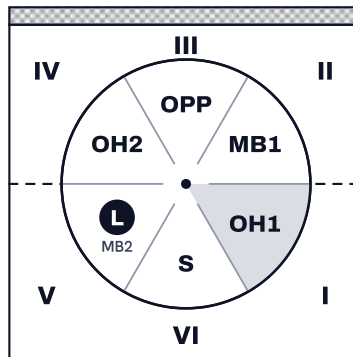

- The libero only plays in the back row and usually replaces a middle blocker. When a middle is in VI or V, the libero plays in their place.
- When that middle reaches I, they serve themselves: under FIVB rules the libero may not serve. Some leagues allow it, so check your own rules.
- If your team loses that serve, the libero may still replace the middle in I.
- When a middle rotates to IV, they are back at the net themselves. By then the other middle is in the back row.

Example: a 5-1 with a libero

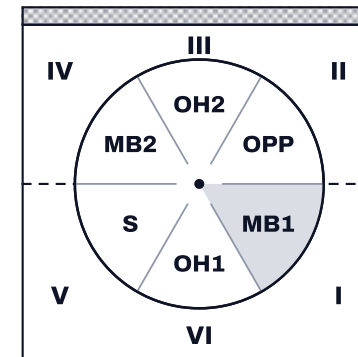

S setter · OH outside hitter · MB middle blocker · OPP opposite · L libero · grey slot: serving

Start: slot 1 (S) is in I and serves. MB2 is in VI, so the libero plays for them.

After one side-out: OH1 serves. MB2 is in V, the libero stays on the court.

After another side-out: MB1 is in I and serves. MB2 is in the front row in IV, the libero is off.

In the Koach app you do not have to turn anything: during live scoring the lineup rotates at every side-out, and the libero can swap with the back-row middle automatically.
